### **DETAILED ACTION**

The references cited in the Search Report of the counterpart PCT application have been considered, but will not be listed on any patent resulting from this application because they were not provided on a separate list in compliance with 37 CFR 1.98(a)(1). In order to have the references printed on such resulting patent, a separate listing, preferably on a PTO/SB/08A and 08B form, must be filed within the set period for reply to this Office action.

### ***Claim Rejections - 35 USC § 112***

The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

Claims 1-14 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

Claim 1 fails to recite any steps reagents or products in connection with the recited amide formation and esterification steps.

The term "figure" in connection with the definition in claim 1 is indefinite since it is unclear if the definitions are also open to other groups.

The claims are replete with preferable groups in connection with the definitions of variables. It is unclear if the claims are limited to the preferred groups.

Art Unit: 1621

The claims are also replete with the term minimal in connection with temperatures and pressures. It is unclear if the minimal value is included by the claim.

In claim 5, it is unclear which enzyme is used.

### ***Claim Rejections - 35 USC § 103***

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 1-14 are rejected under 35 U.S.C. 103(a) as being unpatentable over Maugard et al., Enzymatic synthesis of glycamide surfactants by amidification reaction, Tetrahedron, Volume 53, Issue 14, 7 April 1997, pp. 5185-5194 (Maugard) in view of Bartling et al., Lipase-catalyzed synthesis of geranyl acetate in n-hexane with membrane-mediated water removal, Biotechnology and Bioengineering, Volume 75, Issue 6, Date: 20 December 2001, pp. 676-681 (Bartling) in further view of CA 2276902 (CA 902).

Maugard teaches amidification of glucamines with oleic acid with *Candida antarctica* lipase at page 5187.

The reaction is for up to 130 hours at 55 C at atmospheric pressure, see page 5186.

Maugard fails to teach an esterification reaction with the enzyme. However, it is for this proposition that the examiner joins Bartling and CA902. Specifically, Bartling teaches preparation of geranyl acetate by esterification of geraniol and acetic acid with immobilized *Candida Antarctica*. Notwithstanding the fact that these references fail to teach simultaneous reaction, or combination of amidification and esterification, CA 902 teaches that ceramide compounds are useful in cosmetics. Those of ordinary skill would have been motivated to combine Maugard and Bartling to provide amidification and esterification with *Candida antarctica* lipase to provide ceramide compounds useful in cosmetics, as taught by CA 902. Therefore, the combination of Maugard, Bartling and CA 902 render the rejected claims *prima facie* obvious since these references teach or suggest the elements of these claims with a reasonable expectation of success.
